This switch is a Hi-Low-Off dimming switch. The center position is OFF. Rock the switch one way and the lights are on at full power. Rock the switch in the other direction from off and the lights dim to 50%.

Wiring:
Connect the positive DC wire to the red terminal on the input side of the switch. Connect the negative DC wire to the unmarked terminal on the input side of the switch.

Do the same for the output side of the switch.

All lights after the switch will be controlled.
Standard 18-20 AWG stranded wire is recommended.

2 Year Warranty
