This is a low voltage On/Off switch. Perfectly compact size is suitable for hiding anywhere or to control DC lighting.

12-24V DC / 6A, 120W max load
Standard 18-20 AWG stranded wire is recommended.

Wiring:
Connect the positive DC wire to the red terminal on the input side of the switch. Connect the negative DC wire to the unmarked terminal on the input side of the switch.

Do the same for the output side of the switch being sure the polarity is correct.

All lights after the switch will be controlled.

2 Year Warranty
